

UMassAmherst

Research on Movement Disorders

WHO: We are looking for individuals with movement disorders due to lesion or atrophy of the cerebellum or Parkinson's disease.

STUDIES: Studies are designed to investigate how the brain controls learning and movement. We look at simple finger and arm movements in response to various cues.

TIME: Studies are conducted in 1-2.5 hr sessions. You can participate in as many sessions as you like. You are free to withdraw at any time.

COMPENSATION: You will be paid \$10/hr for your time

If you would like to participate, in our research, please call: 413-545-4831 or email: cognaclab@gmail.com

Research conducted by Dr. Rebecca Spencer, UMASS, Amherst, Department of Psychology, 419 Tobin Hall, Amherst, MA Approved by the UMASS IRB (#2009-0493 & 2009-0242)

Notice or Research Opportunity

I am contacting you to let you know of research being conducted at the University of Massachusetts, Amherst that might be of interest to you.

The new Cognition and Action Laboratory at the University of Massachusetts is recruiting individuals, such as yourself, with movement disorders and/or neurological damage to movement control parts of the brain, particularly, the cerebellum.

It is important for you to realize that this research is not related to your medical treatment. The research is being conducted to learn more about the cerebellum with the intent of eventually designing therapies based on these results.

If you are interested in being contacted by Professor Rebecca Spencer, the director of the lab, to participate in studies and/or to learn more about the research being conducted at UMass, please call Professor Spencer directly at 413.545.5987 or email her at rspencer@psych.umass.edu

Again, this research is not part of your medical treatment. Our role in sharing this information with you is to provide you with the opportunity to participate in research on cerebellar function.
