

# Individuals with SCA6 NEEDED FOR MULTIPLE NEUROLOGICAL RESEARCH STUDIES

Adults with SCA6 are needed to participate in a research study of cerebellar function (JHM IRB 02-09-26-07). **Subjects should have a confirmed diagnosis.** Testing will involve a ninety minute MRI of the brain and cognitive testing. Participation in the eye movement study is encouraged.

MRI scan of the brain

Thinking and Mood Testing

Recording of eye movements with electrodes, a camera, or contact lens-like device

Subjects will be paid \$25 per session of testing
